

2008 Pesticide Safety Education Program Schedule

The pesticide commercial / noncommercial initial certification and recertification training sessions are finished for 2008.

New training sessions will start in February 2009 for those who need initial pesticide licenses or need to recertify by April 15, 2009.

If you wish to obtain a license or recertify in 2008, you will need to test in the general standards category and at least one other category, according to the type of license you require. A good source of information on how to obtain study materials and find locations of exams is on this website. Just click the back arrow and scroll down to “Who needs a pesticide license in Nebraska,” then click on Commercial or Noncommercial Applicator to see:

- List of commercial/noncommercial categories
- Purchase UNL Extension study materials
- Certification/license exam preparation
- Want to take the certification test for your license
